1   Introducing MouseMojo

Welcome to MouseMojo. A new way of using your mouse that allows you to quickly and seamlessly perform the most common tasks.

▶ Why do you need MouseMojo?
▶ Requirements
▶ How to buy MouseMojo

1.1   Why do you need MouseMojo?

Sign your emails with a simple mouse move

MouseMojo can be set up to insert different kinds of signatures with a simple mouse move. The signatures could be plain text, HTML, image or any other type of content.
Different signatures can be connected to different mouse movements so that you can sign your personal and business emails differently every time.

Insert any content anywhere in no time.

In addition to plain text - MouseMojo supports any kind of content from any application. Simply copy the content to your clipboard and press "Import from Clipboard" button from MouseMojo Signatures and Clipboard pane. The content will be saved and ready to be posted anywhere you like simply by moving your mouse.

Change the way you use your computer

Forget about different kinds of shortcuts and third party signature and clipboard managers. Use your computer naturally - simply move your mouse in one of the eight directions and an action associated with that movement and application will be executed. It will become a second nature to you after just a few days. You will wonder why you could not do this before.

Multiple action options

As already mentioned - MouseMojo can paste different kinds of content into many applications as well as open web pages, directories, documents, start applications and simulate most useful keyboard shortcuts.

Each application can have a different set of actions

MouseMojo can detect the application you are using and change it's behaviour to your preference. For example - while browsing the internet - moving your mouse to the right could simulate pressing of the "Forward" button in your browser. Same movement could insert your personal signature if you are writing an email or start your favorite MP3 player if you do it anywhere else.

Absolutely configurable!

You can configure MouseMojo any way you like. In addition to changing your actions - you can change many other aspects of MouseMojo as well. For example - you could change the default on-screen display settings or disable it altogether. Mouse sensitivity as well as "Action Key" can be changed to your preference.

1.2   Requirements

MouseMojo will run on following operating systems - Windows 95, Windows 98, Windows Me, Windows 2000 and Windows XP.

A pointing device (mouse, trackball or any other) is required.

There is no other specific requirements for MouseMojo.

1.3   How to buy MouseMojo

You can buy MouseMojo for only **$27.95**. You will get free minor upgrades and email support as well.

To buy MouseMojo, please go to http://www.softwareriver.com/html/buy_mousemojo.html

Please follow the "Order Now" link and follow the instructions to complete your purchase.

A confirmation email will be sent to you containing the Serial Number that you must enter to register your application.
When you start MouseMojo - a window will pop up that allows you to enter your **name and your serial number. Then click on the "Register" button to complete your registration.** Alternatively - this dialog can be shown either from the about dialog or directly from the main menu.

If you have any questions about your purchase, please contact us at sales@softwareriver.com
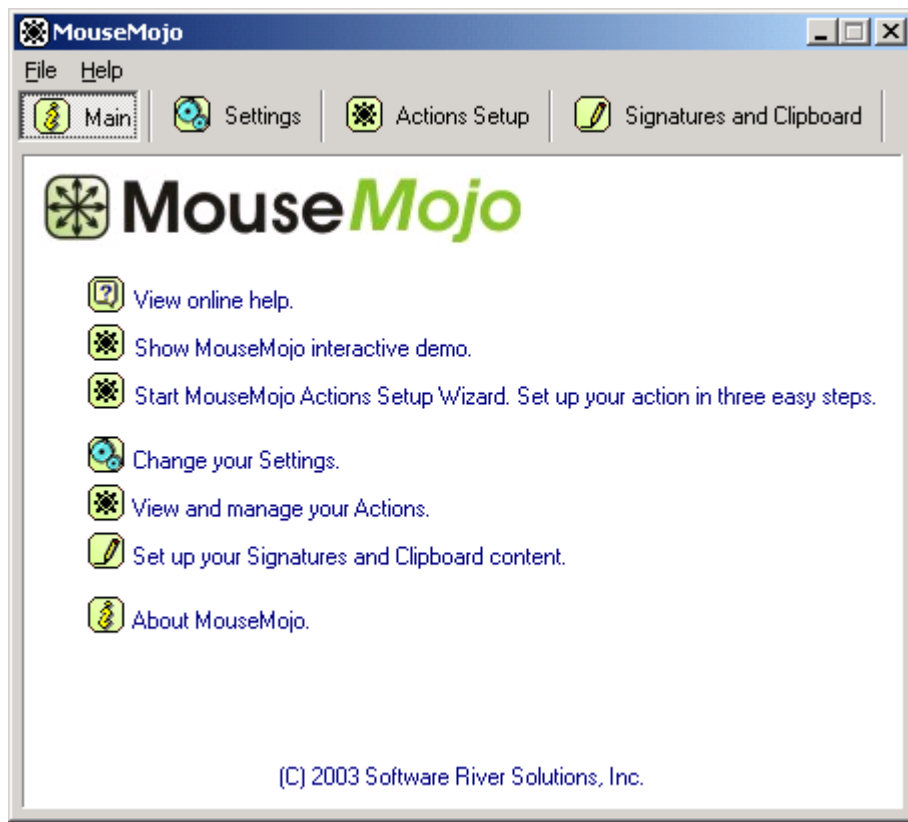

2   Explaining the user interface

In this section we will help you to quickly become familiar with MouseMojo user interface.

‣ Main MouseMojo Pane
‣ Settings Pane
‣ Actions Setup Pane
‣ Signatures and Clipboard Pane

2.1   Main MouseMojo Pane

This is the main MouseMojo pane.

Items on this pane will allow you to easily navigate to other sections of MouseMojo.

- View online help. Shows this help window.

- Show MouseMojo interactive demo. Click to open an interactive demo that will help you start using MouseMojo.

- Start MouseMojo Actions Setup Wizard. Click to start the wizard that will help you set up your actions for different applications and movements in just three easy steps.

- Change you Settings. Click to switch to the "Settings" pane.

- View and manage your Actions. Click to switch to the "Actions Setup" pane.

- Set up Signatures and Clipboard content. Click to switch to the "Signatures and Clipboard" pane.

- About MouseMojo. Click to show the about box.

2.2   Settings Pane

This is the MouseMojo Settings pane. It allows you to change some of the general MouseMojo preferences.
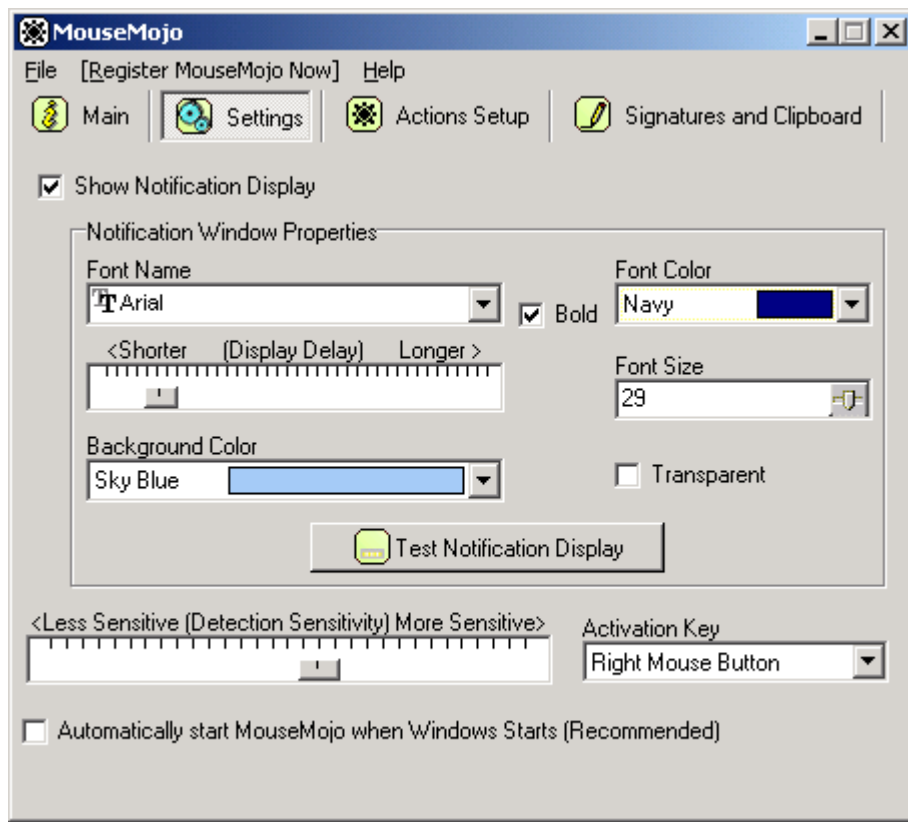

- Show Notification Display checkbox. Check or uncheck this box to enable/disable the on-screen display.

- Font Name drop down box. Select the font type you want to use for your Notification Display.

- Bold checkbox. Check to make the selected font style bold.

- Font Color drop down box. Select the text color for the Notification Display.

- Display Delay slider. Use this slider to change the length of time that on-screen display will stay visible.

- Font Size drop down box. Use it to change the font size.

- Background Color drop down box. Select the background color for the notification display. (available only if transparent option is not enabled)

- Transparent check box. Check this box if you want your notification window to have transparent background. (This option may not work on some systems)

- Test Notification Display button. Click this button to test your Notification Display settings. A sample notification display will appear.

- Detection Sensitivity slider. Use this slider to change the MouseMojo sensitivity while detecting your mouse motion. More sensitive means that you will have to move your mouse less in order to execute an action.

- Activation Key drop down box. Use this box to change the key(s) used to activate the MouseMojo movement detection process. This option has only two settings. Right mouse button and CTRL+SHIFT keys. If Right mouse button is selected (default) - simply hold down your right mouse button, move your mouse in desired direction and finally release the mouse button to execute the action (if any assigned for that movement). If you prefer to use your keyboard to initiate the movement detection select the CTRL+SHIFT option. When this option is selected - instead of holding down the right mouse button - you should hold down CTRL and SHIFT keys together on your keyboard.

- Automatically start checkbox. Check this box if you want to automatically start MouseMojo when Windows starts. This option is recommended.

2.3   Actions Setup Pane

This is the MouseMojo Actions Setup pane. Here you will be able to set up actions for various applications and mouse movements.
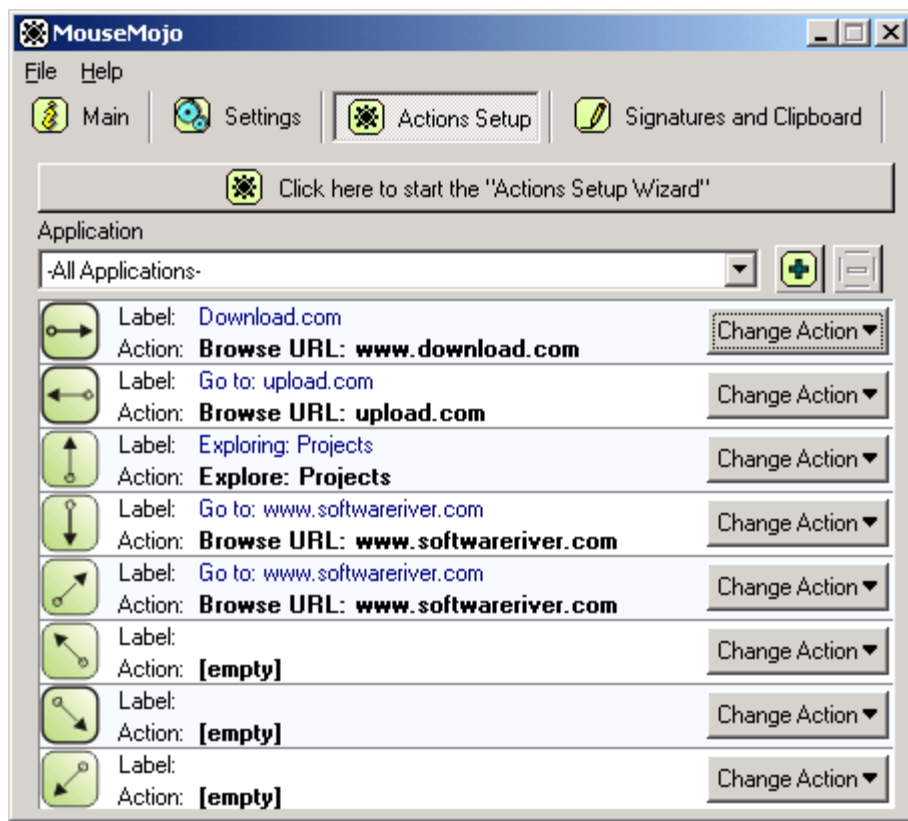

- Actions Setup Wizard button. Click this button to start the wizard that will guide you trough the actions setup process step-by-step. Click here for more information about this wizard.
- Application drop down box. This drop down box contains all applications you have configured for use with MouseMojo and "All Applications" entry that is the default and applies to all applications. Switching from one application to another will instantly show the actions for that application. (mmtutor.exe application is there by default and it is used for MouseMojo Tutor application)

- - Click this button to add new application. A dialog containing all currently running applications will appear. Simply select the application you whish to configure.
- - Click this button to remove the currently selected application. The "All Applications" item cannot be removed. Removing an application will reset it's actions to default ("All Applications") actions.
- Directional sections. Each section represents a specific mouse movement. There is eight possible directions MouseMojo can use. Each section contains the following:
  - Label - This is the label for the action selected. Used in on-screen display. (you can click this label to rename it)
  - Action: A more descriptive action name describing the action to be performed.
  - Change Action button. Click this button to change the action for the particular movement. A popup menu will appear that will allow you to select among various types of actions.

TIP: Clicking on the action label allows you to change it. On screen display will then show this label when it is executed.

2.4   Signatures and Clipboard Pane

This is the MouseMojo Signatures and Clipboard Pane in a simple text mode (slightly different for arbitrary clipboard content). It allows you to manage your signatures and clipboard items.
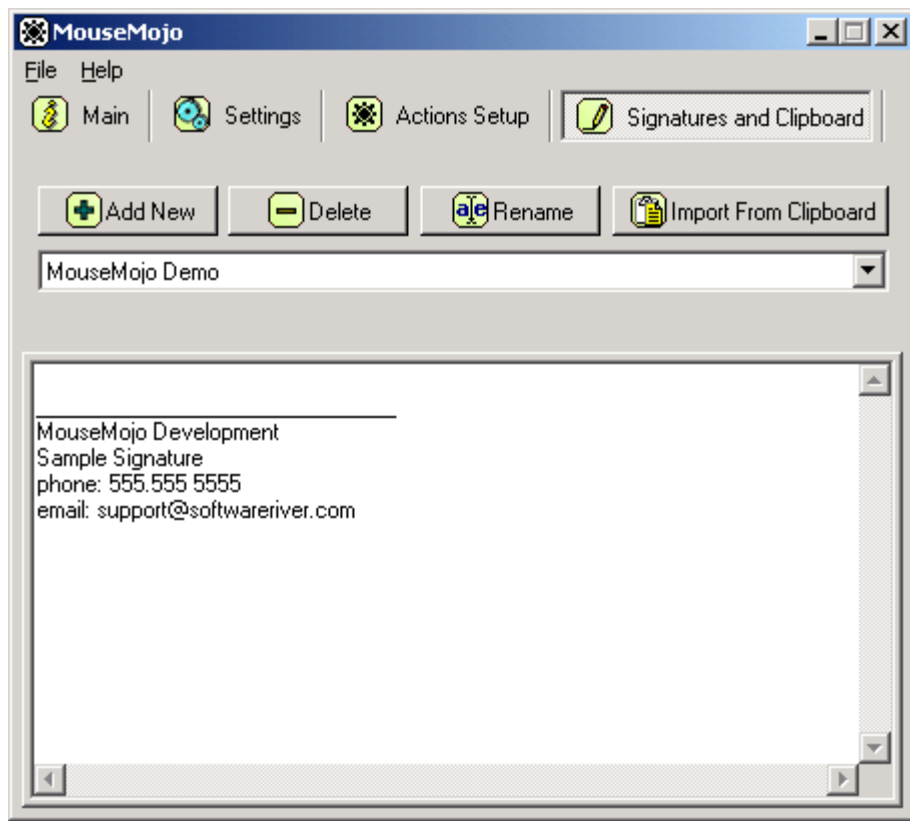

- Add New button. Click this button to create a new item. (signature or any other content)

- Delete button. Click this button to delete the selected item. Note that this operation will warn you if that item is in use by any action. Deleting a signature that is used by one or more actions will reset the actions that were using it to [none].
- Rename button. Click this button to rename your item. Your actions that use this signature will be renamed automatically.
- Import From Clipboard button. Click this button to import the clipboard content into the current item. The pane will change slightly for these items and it will display a preview bitmap or sample plain text if the imported data contains it.

When you change the text of an item - it will be saved automatically.

NOTE: Items imported from the clipboard such as HTML items will be displayed in a slightly different pane containing a plain text version or the bitmap image of the item (if the item contains such data). May of the imported clipboard items will contain several different data formats. For example - importing an item from your word processor might contain a native word processor data, HTML version of the data, plain text version of the data and Rich Text version of the data. While MouseMojo will try to extract the sample text for your preview - all item parts and formats will be kept in tact and be used as if you had just copied it to the clipboard.

3 Creating and modifying actions and applications

In this section we will help you with creating and modifying actions and applications that are used with MouseMojo.

▶ Configuring a new application
▶ Assigning Actions to an Application manually
▶ Using the Actions Setup Wizard

3.1 Configuring a new application

You can easily configure a new application with MouseMojo either from the Actions Setup Pane or as a part of the Actions Setup Wizard .

To add a new application from the Actions Setup Pane - simply click on the ⊕ button.
A window will appear listing all currently running applications. If the application you want to configure is not currently running, please start it and then click on the ↻ "Refresh" button.
Select the application you want to add and click on the "OK" button.

That's all - the application will be appended to the list of your applications. Now you are ready to

assign actions to it.

If you are using the wizard - first wizard screen will ask you if you want to create an action for all applications or a specific application.
If you select a specific application - the application selection window will appear allowing you to select among running applications.
It does not matter if the application was already listed in MouseMojo or not.

3.2   Assigning Actions to an Application manually

Assigning actions "manually" involves only a few mouse clicks.

From the Actions Setup Pane - simply select the application you want to assign the action for (click here for more information about configuring a new application   ), decide on the mouse direction you want to use (clearly indicated with the arrow image) and then click on the "Change Action" button. A popup menu will appear allowing you to select among various actions. If an action needs additional information, you will be presented with an input dialog allowing you to enter the data or select files and folders.

After assigning a new action a default label and action name will be displayed on the screen.

To remove a specific action and not use the default action - select [none] from the Change Action menu. To make sure that a certain application is going to execute a default action for some events - make sure that these movements have "Default" as their action type. "Default" means that the action assigned to "All Applications" will be executed.

FAQ : What is the difference between [none] and Default action?

▪ **TIP: Action label is used in on-screen display. You can change it simply by clicking on it and entering a new one.**

3.3   Using the Actions Setup Wizard

Actions Setup Wizard allows you to assign actions to an application (or all applications) in three easy steps. Once you become familiar with the Actions Setup Pane - you will find that it is much faster to configure your actions directly from there. Assigning Actions to an Application manually

Step 1 - Select the application.
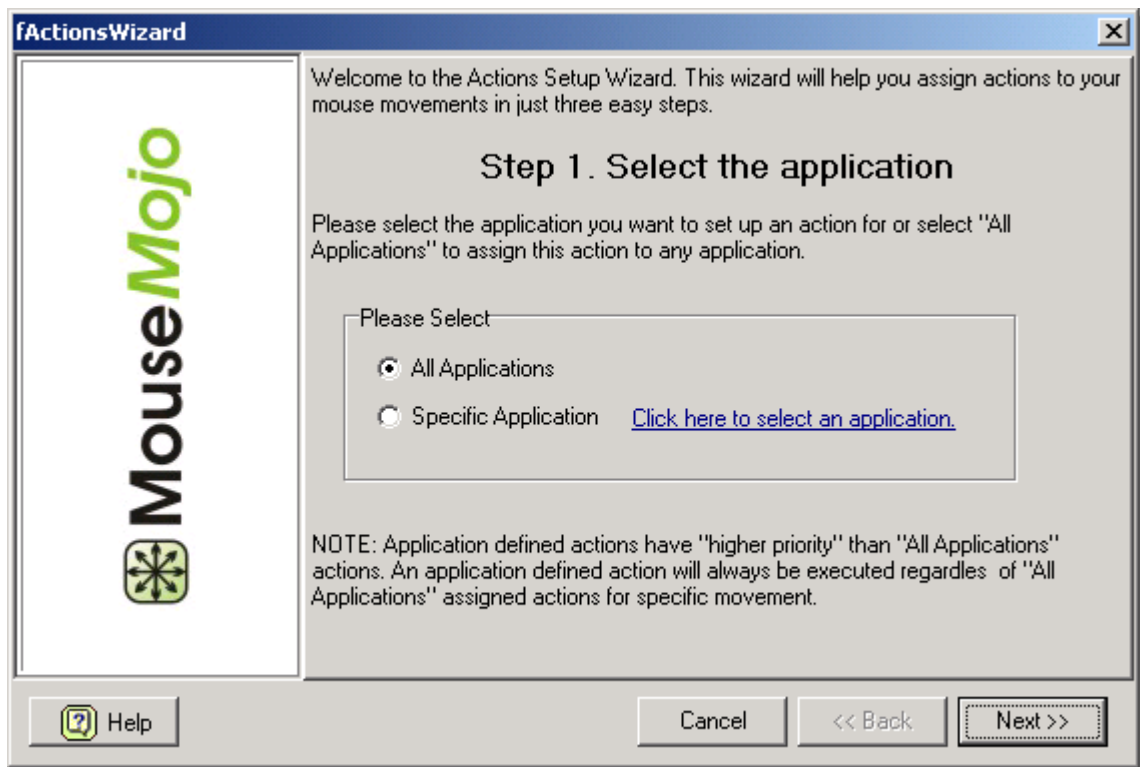

If you want to configure an action that will be used as a default action - select All Applications.
Otherwise, select Specific Application
(a dialog will appear allowing you to select among running applications)
Click on the Next button to continue.

Step 2 - Select the direction
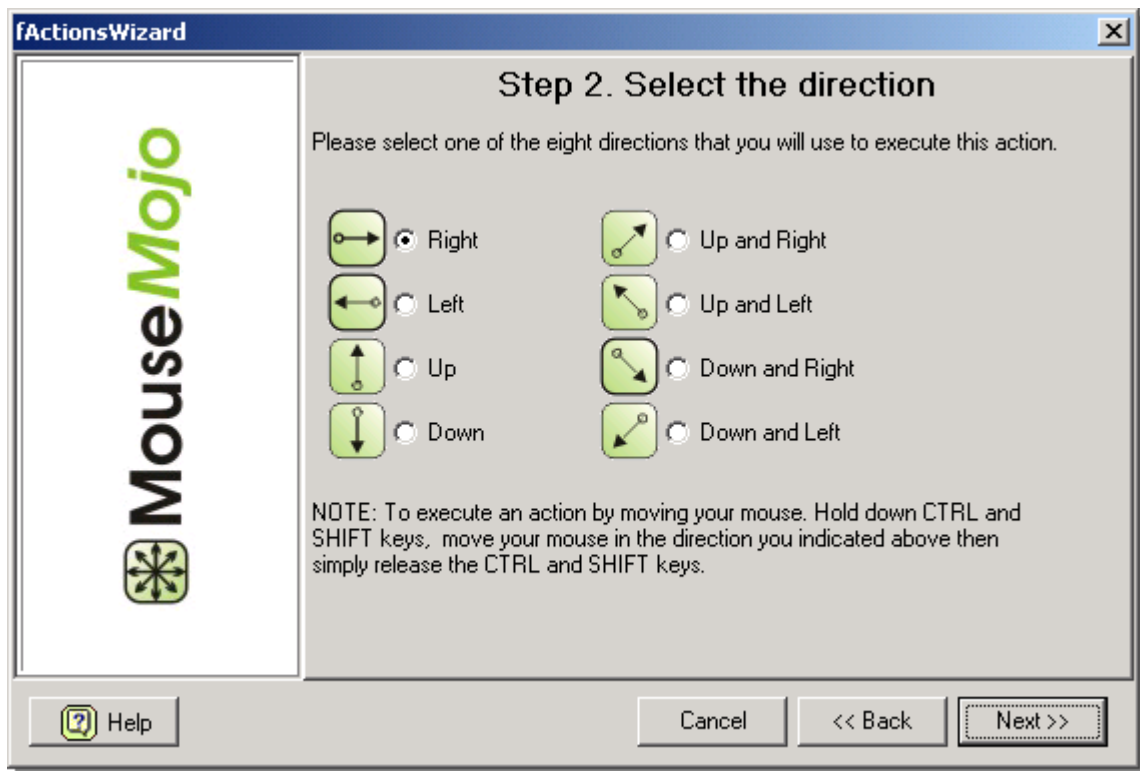

Select the direction that will trigger your action. The arrows indicate the direction.

Step 3 - Select the action to be executed
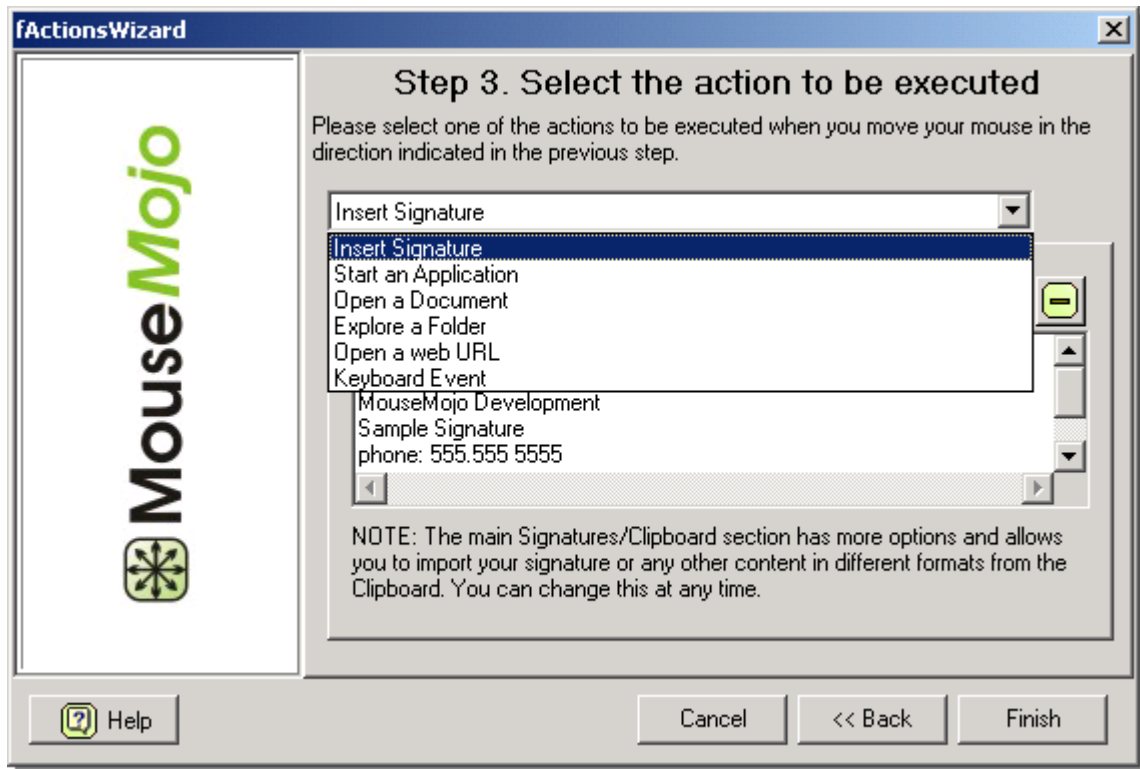

Here you will be able to select among various actions from the drop down box. The panel below the action type will change depending on the action selected and contain options for that particular action. For example - if you select Start an Application as your action - the panel will contain a clickable text that will allow you to select the application you wish to start.

That's all - simply click on the Finish button to complete the wizard. If the action you have selected already exists for that application - you will be prompted to confirm the change.

NOTE: While new plain text signatures can be set up from within the wizard - advanced clipboard items can be imported only from the Signatures and Clipboard Pane . Once imported - you will be able to select it as any other item in the wizard.

4   FAQ - Frequently Asked Questions

The frequently asked questions should help you to quickly find answers to most common questions.

‣ How do I pause MouseMojo temporary?
‣ How do I use my keyboard instead of right mouse button for activation?
‣ Can I disable the on-screen display?
‣ Can I use my scanned signature image to sign my emails?
‣ What is the difference between [none] and Default action?

4.1   How do I pause MouseMojo temporary?

‣To temporary pause MouseMojo and stop detecting the mouse motions - select "Pause MouseMojo" menu item from the main menu or tray icon popup menu. To resume the detection - select "Resume MouseMojo" from the same menu.

MouseMojo system tray icon at the bottom of your screen has black and white colors while MouseMojo is active ⊗. Red ⊗ color is used to indicate that MouseMojo has been temporary disabled.

4.2   How do I use my keyboard instead of right mouse button for activation?

‣ If you prefer to use your keyboard to start the mouse movement detection - simply open the Settings Pane and select CTRL+SHIFT from the activation key drop down box. This will switch your activation key to SHIFT+CTRL. If you do this you have to hold both keys simultaneously while performing your action.

4.3   Can I disable the on-screen display?

‣ Definitely! Open your Settings Pane and uncheck the "Show Notification Display" checkbox.

4.4   Can I use my scanned signature image to sign my emails?

‣ Yes. Simply open your scanned signature with your browser or word processor, select it and copy it to the clipboard by pressing CTRL+C. Then click on the "Import From Clipboard" button in

MouseMojo Signatures and Clipboard pane .

Note that any other type of content can be imported into MouseMojo using this procedure.

4.5 What is the difference between [none] and Default action?

▶ [none] - is indication that no action should be performed for specific application regardless of the "All Applications" settings. Set an application action to Default to execute a default action for that movement.

NOTE: Obviously, while changing actions for "All Applications", the Default option is disable since "All Applications" actions are the Default.
